

## 106 Lab Guide

[Miscellaneous](#) / Text Editors & IDEs

# Visual Studio Code

To quickly open the currently directory in VSCode, a very popular Integrated Development Enviroment (IDE), from the terminal we can type

```
code .
```

This will display all the files in the current directory in the file explorer on the left side of VSCode. If you would like to only open a specific file, you can type

```
code <filename>
```

# Sublime Text

If instead you would just like to open the current file in a basic text editor without all the fancy features of an IDE, you can type

```
subl <filename>
```

or for some reason you want the current directory to be displayed in the file explorer on the left side of Sublime Text, you can type

```
subl .
```
