CS 160/260 • User Interface Design and Development · Summer 2022
Noah Schwartz

What Is An Engine?

What Is An Engine?

IDE v.s. Engine

What Is An Engine?

IDE

Code + Compiler
(with minimum graphical display)
Visual Studios, IntelliJ, Atom, etc.

v.s.

Engine

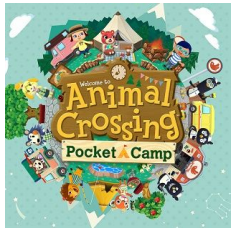
An advanced graphical framework built on user interfaces and pre-done work to make a game.
Lots of behind the scenes work.
Uses IDE's for the coding portions.
Unity, UnReal, GameMaker, etc.

Why Unity

Why Unity

GENSHIN
IMPACT

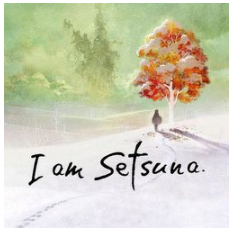
OVERCOOKED!



Animal Crossing
Pocket Camp

SUPER MARIO RUN

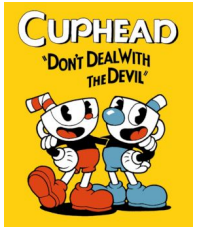
HOLLOW KNIGHT



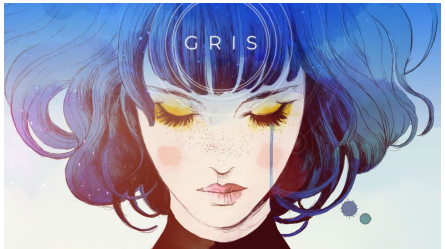
I am Setsuna.

AMONG US

Untitled
Goose Game
by House House



CUPHEAD
"DON'T DEAL WITH THE DEVIL"



GRIS

POKÉMON
GO

Why Unity

Scalability

Make large-scale projects and develop Triple A games.

Ease of Use

Simple UI so any new programmer can make a game at any level.

Diverse Features

Various ways to accomplish the same task. Allows creative freedom.

Free

Free to install the Personal Version. Once you make over 100K a year for your game, you then switch to paid versions.

Why Unity

Scalability

Make large-scale projects and develop Triple A games.

Ease of Use

Simple UI so any new programmer can make a game at any level.

Low Floor

Wide Walls

High Ceiling

Diverse Features

Various ways to accomplish the same task. Allows creative freedom.

Free

Free to install the Personal Version. Once you make over 100K a year for your game, you then switch to paid versions.

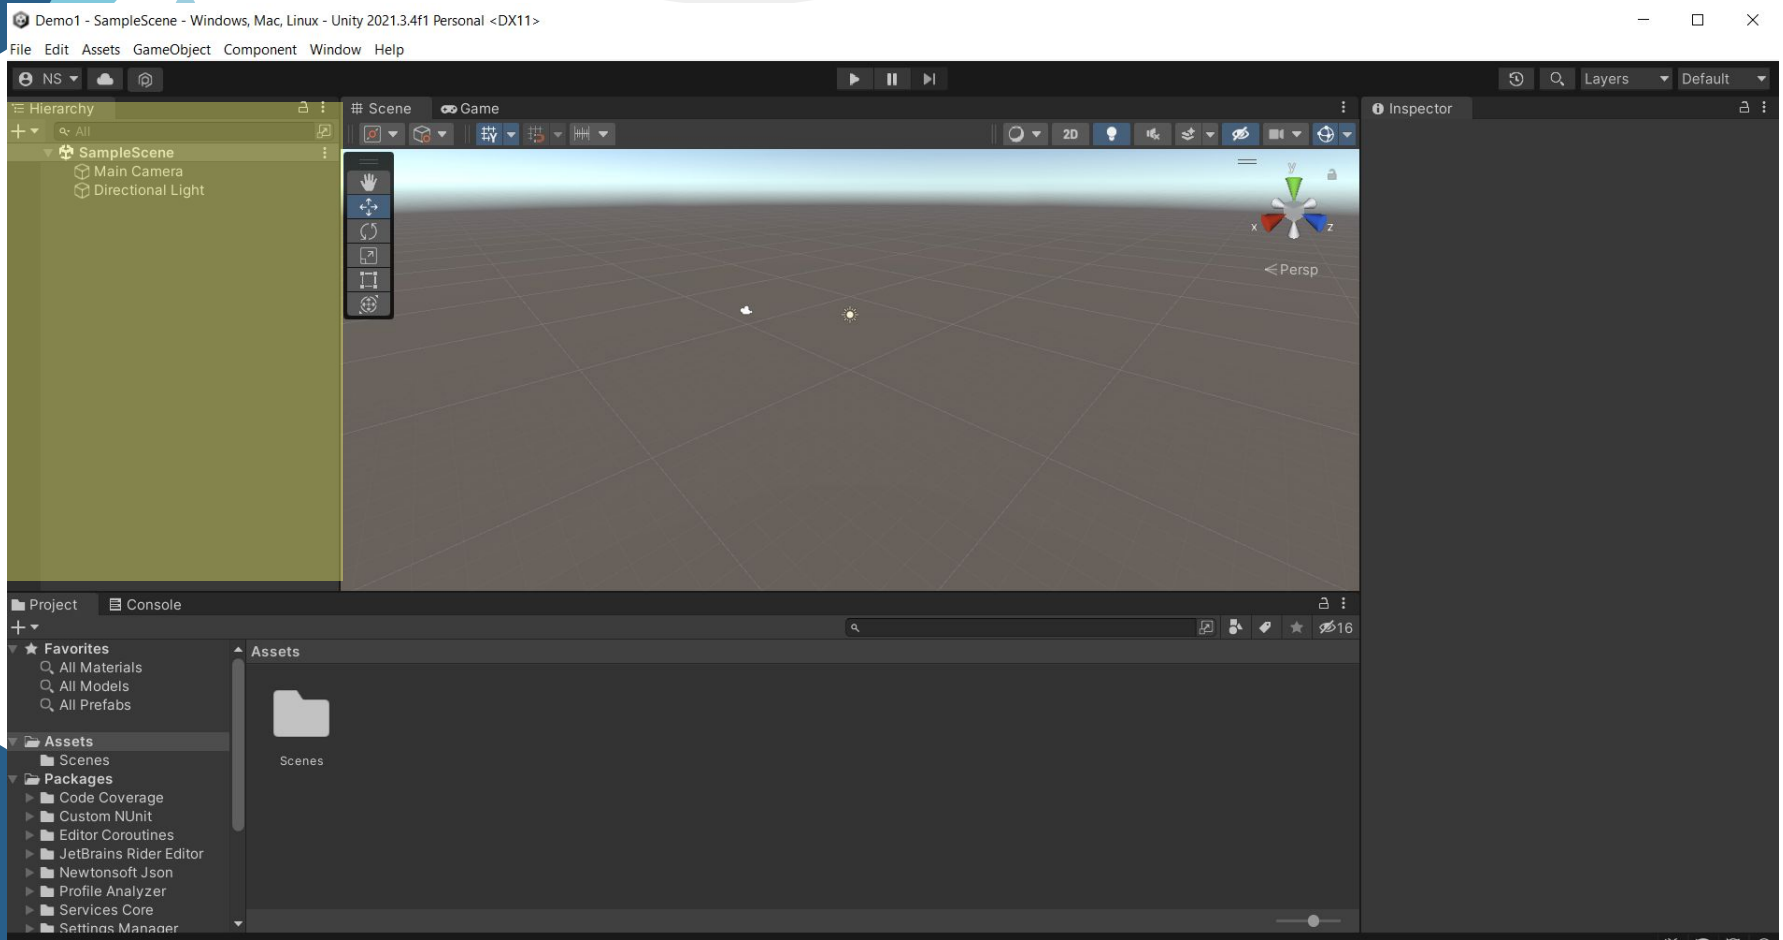
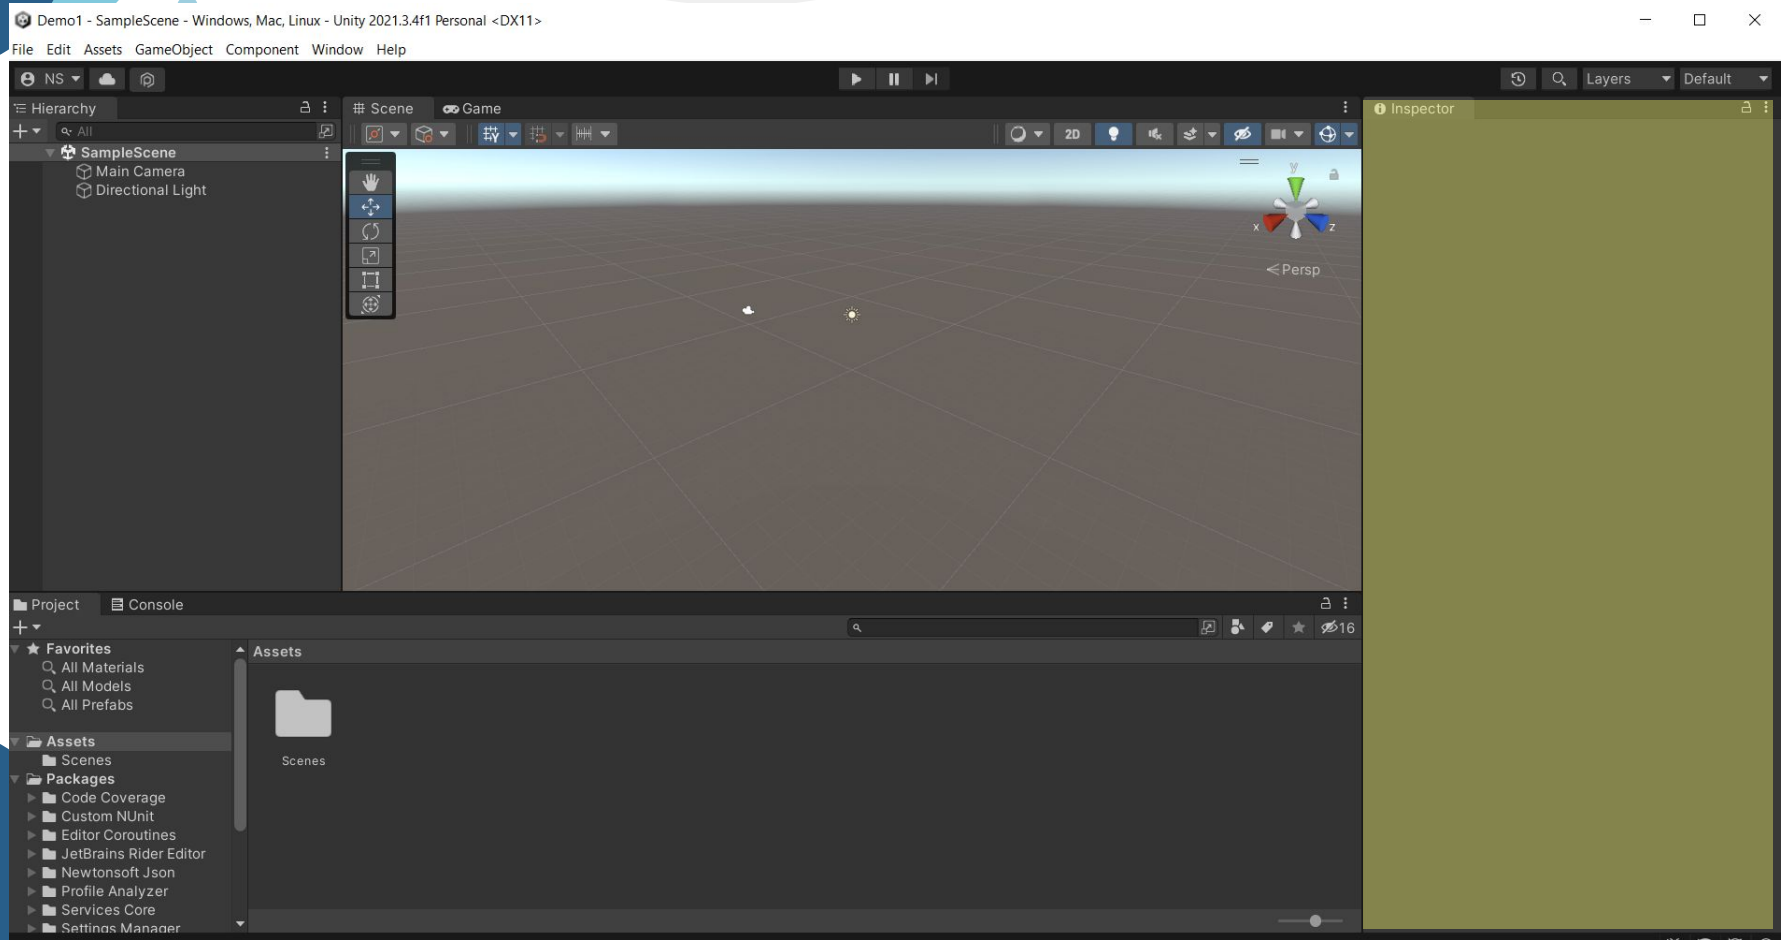
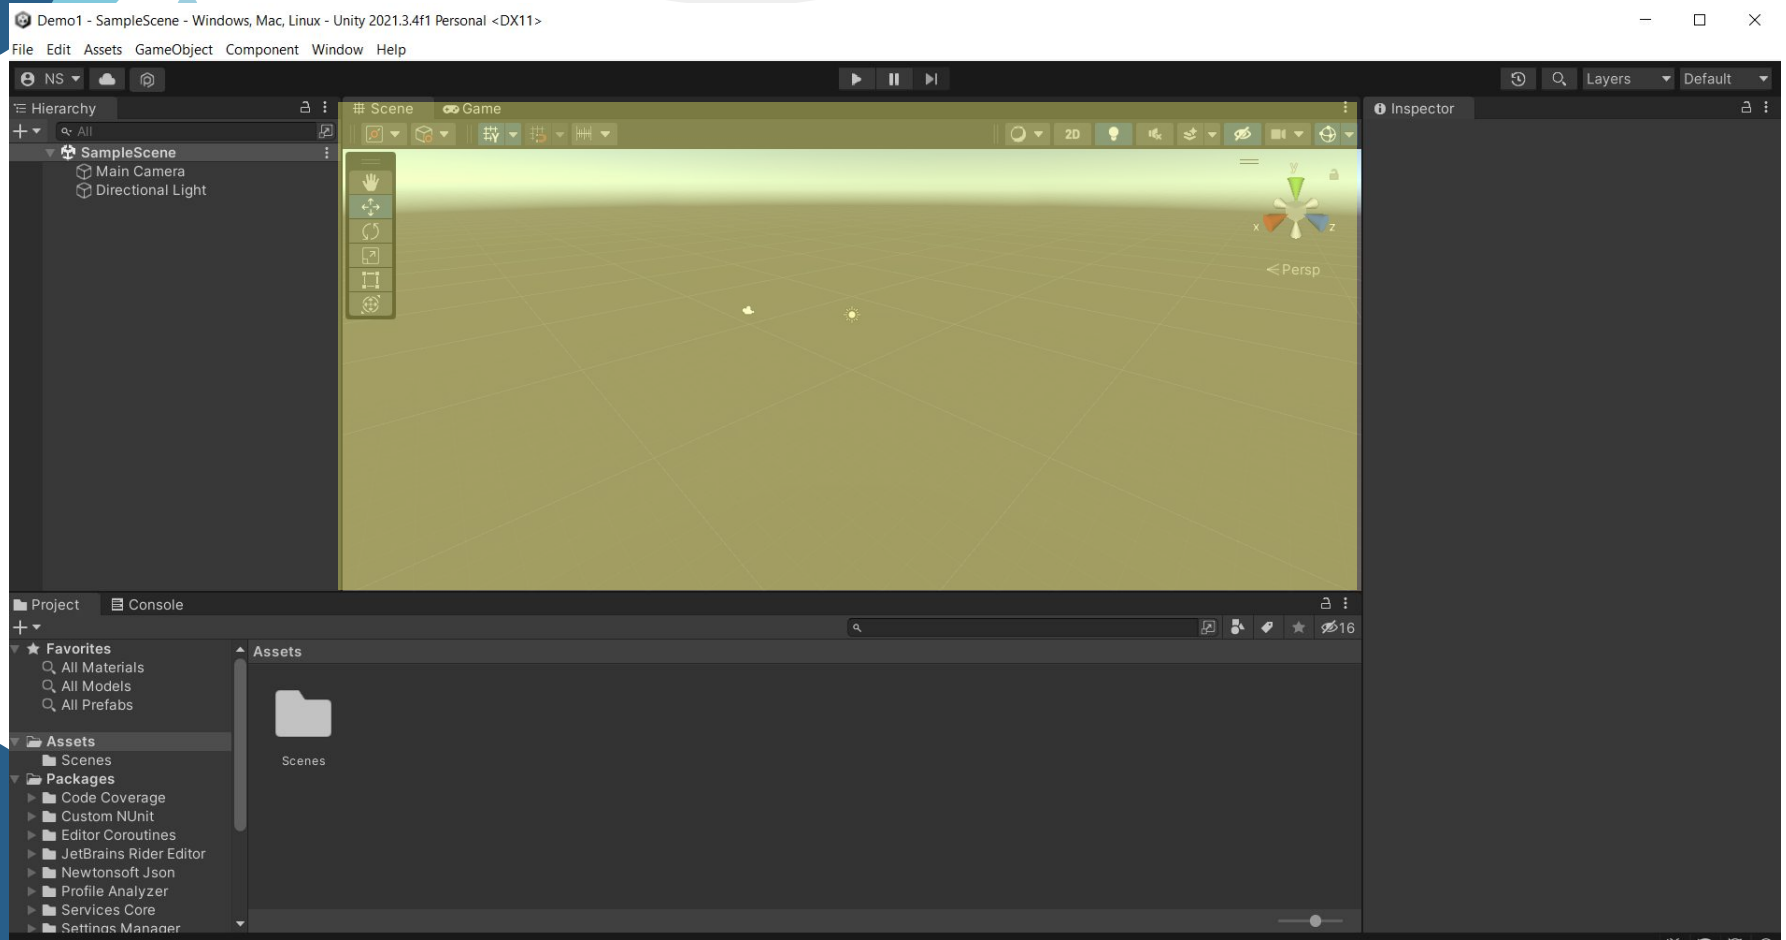
Objects In The Scene



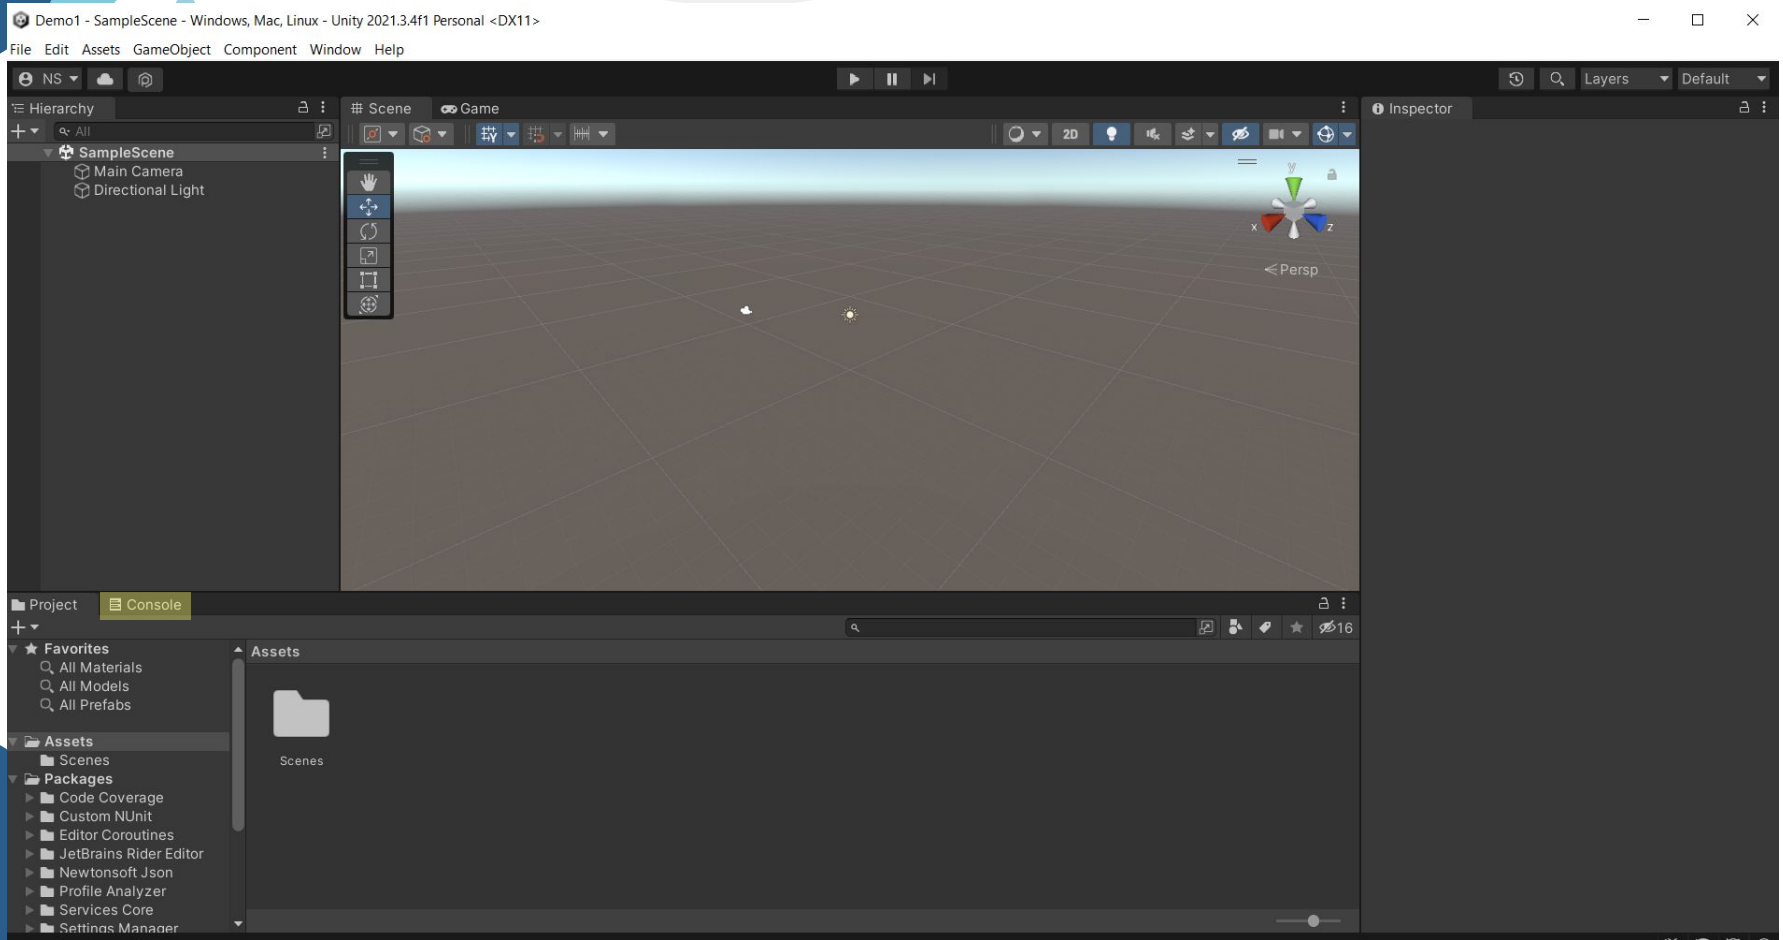
Object Properties



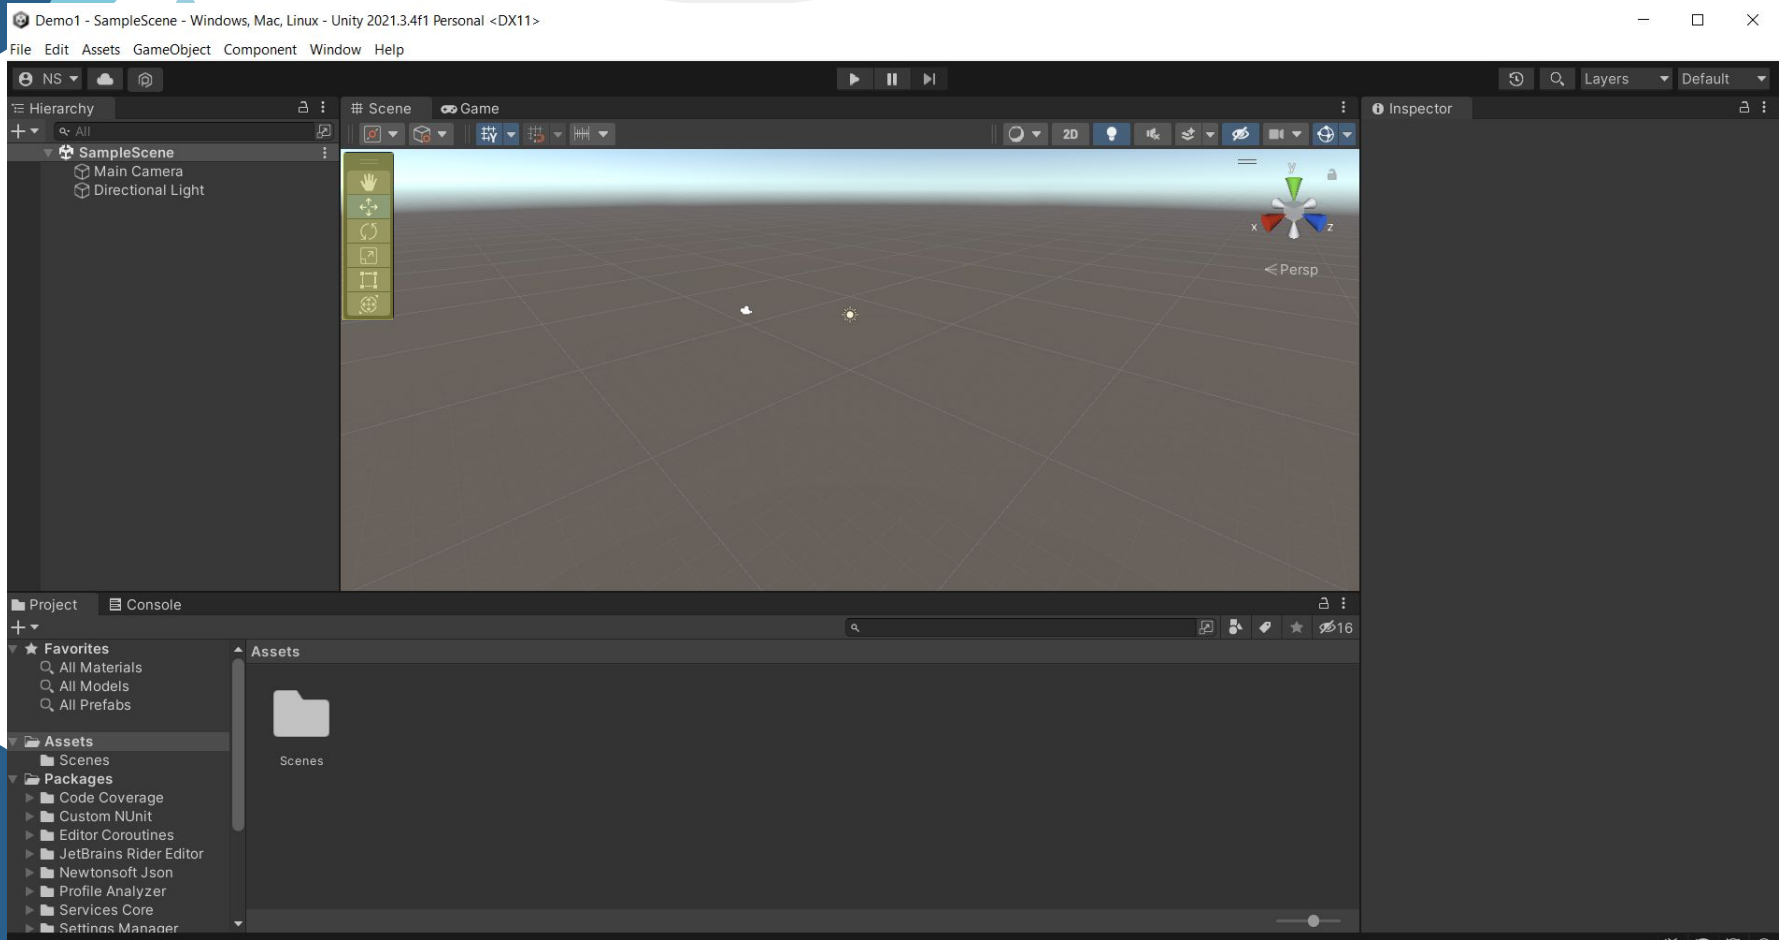
The Visual Display of the Game



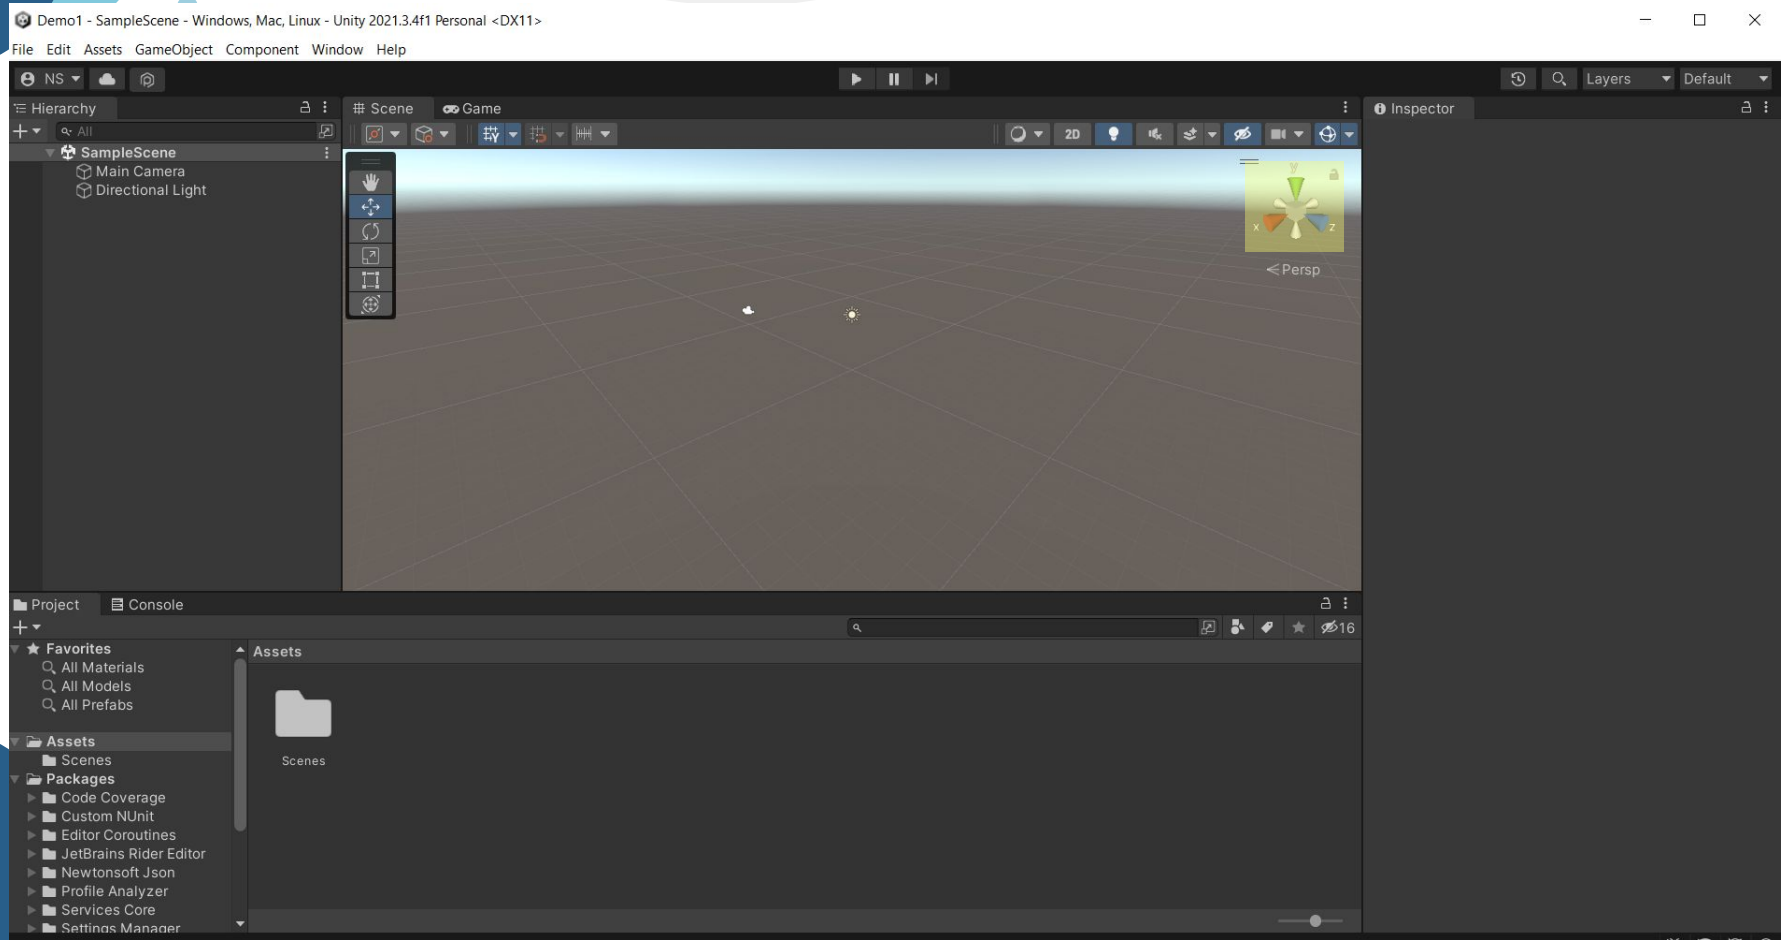
Where Error Messages or Print Messages Are



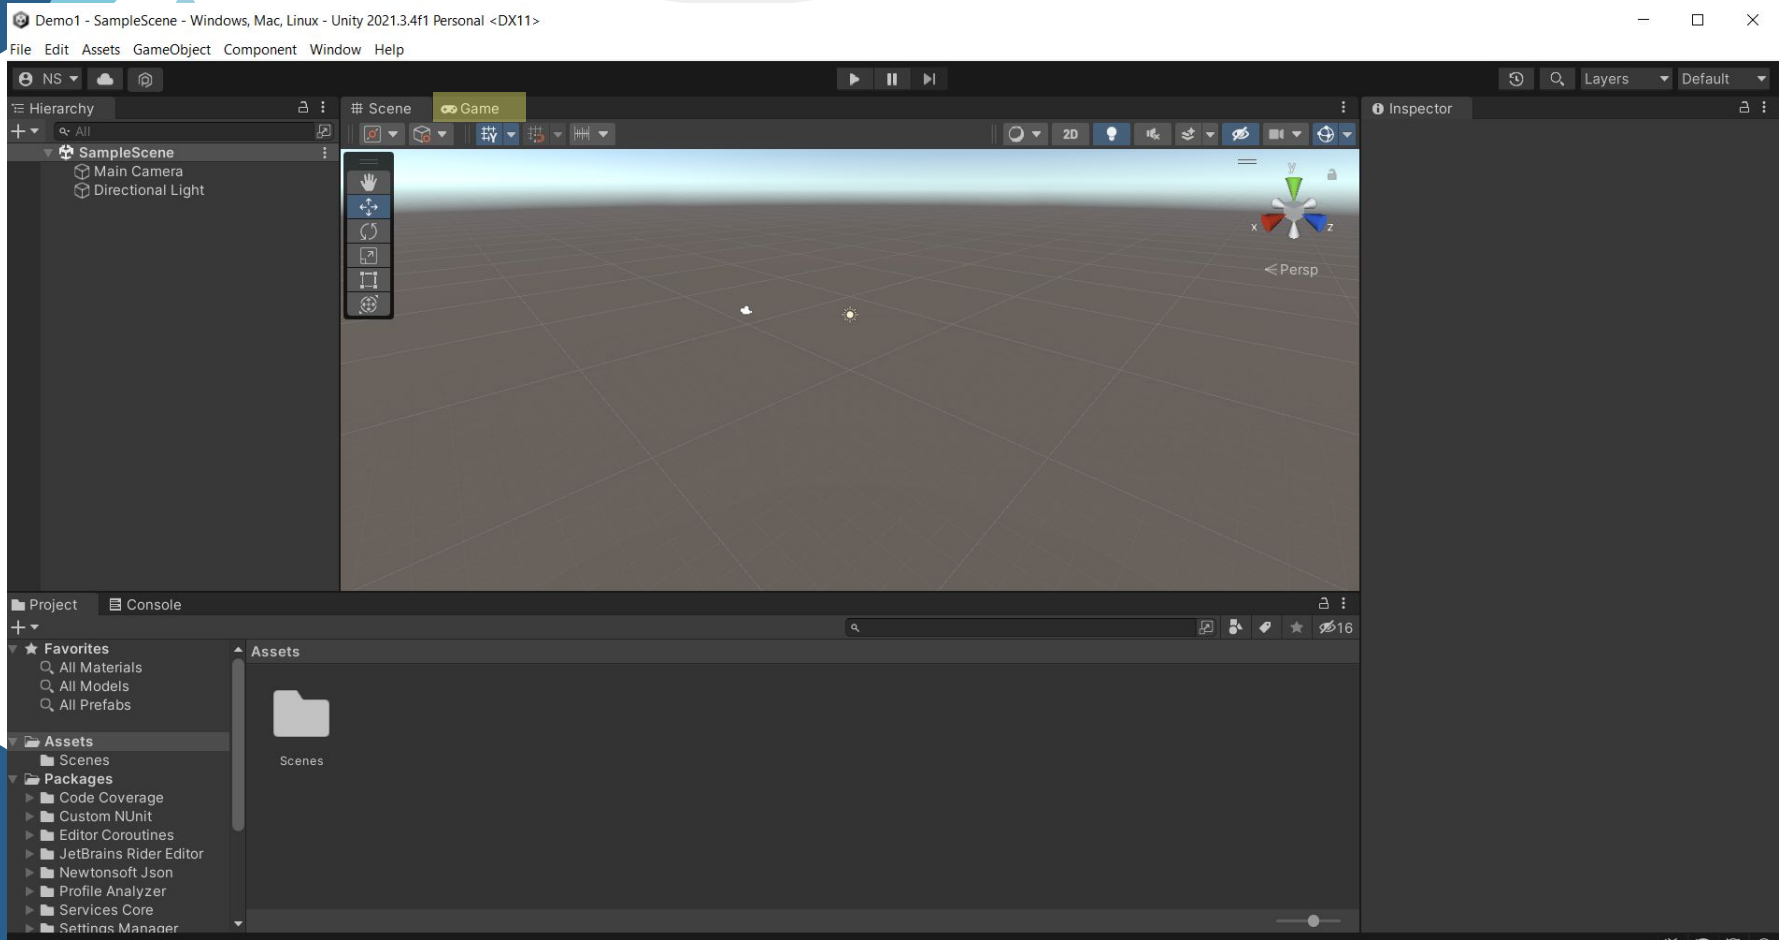
User-Friendly Tools to Navigate the Scene View



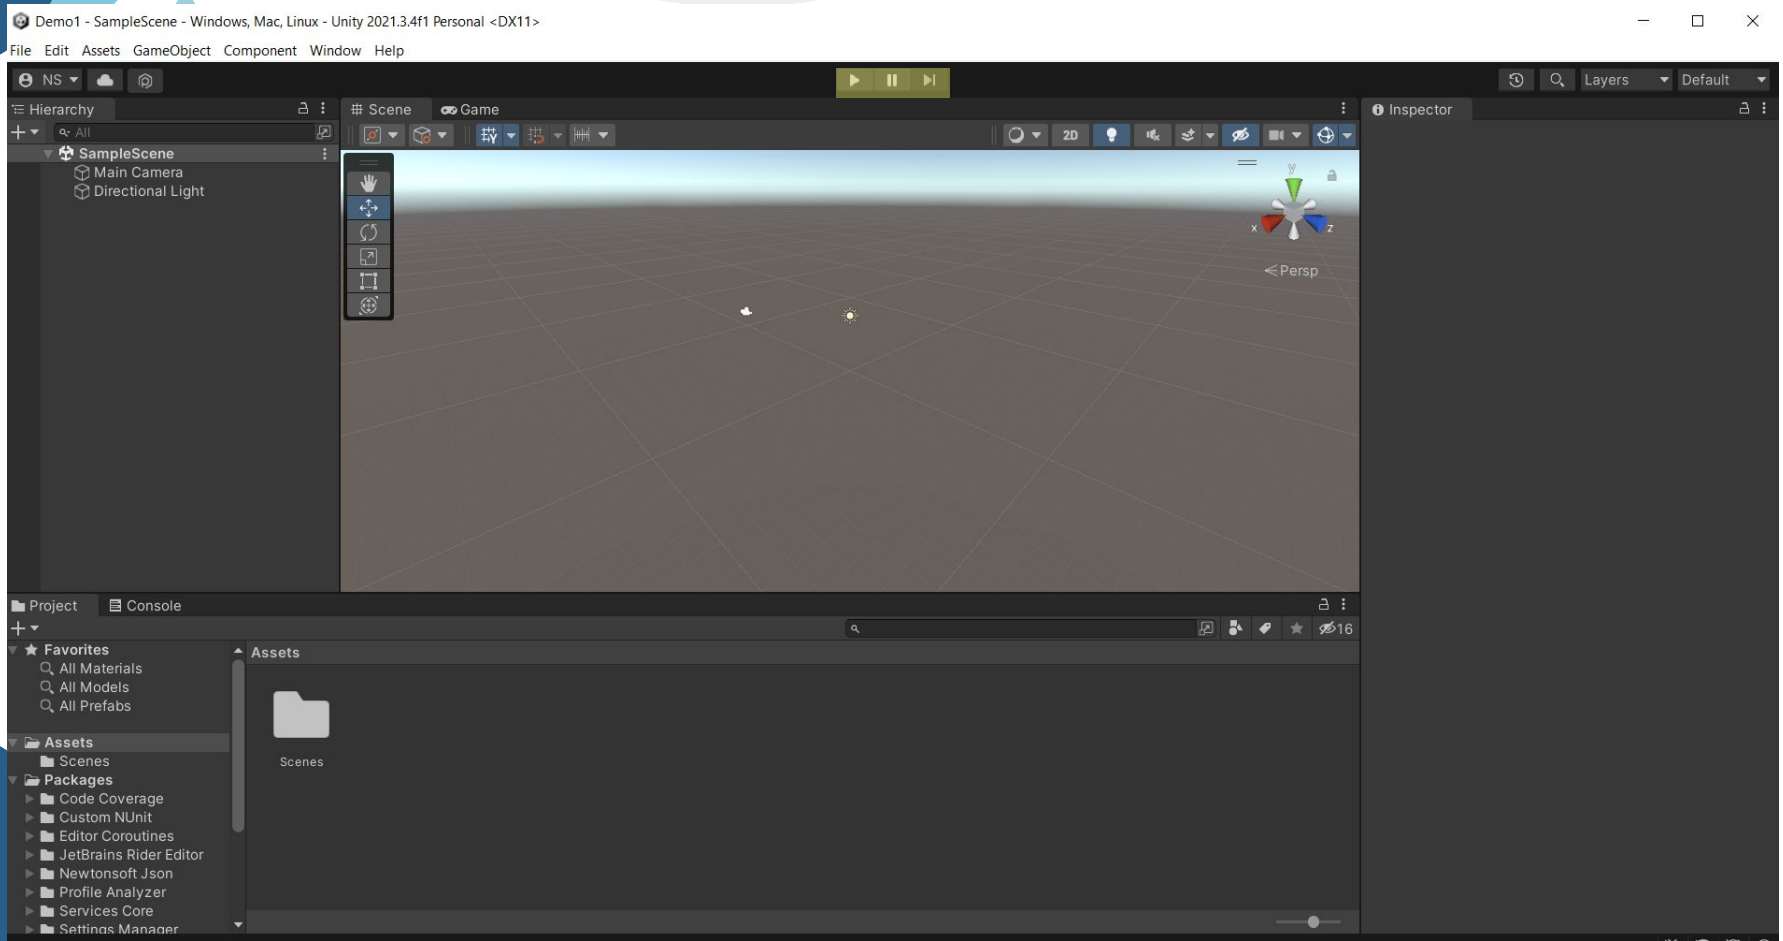
Angle Of View



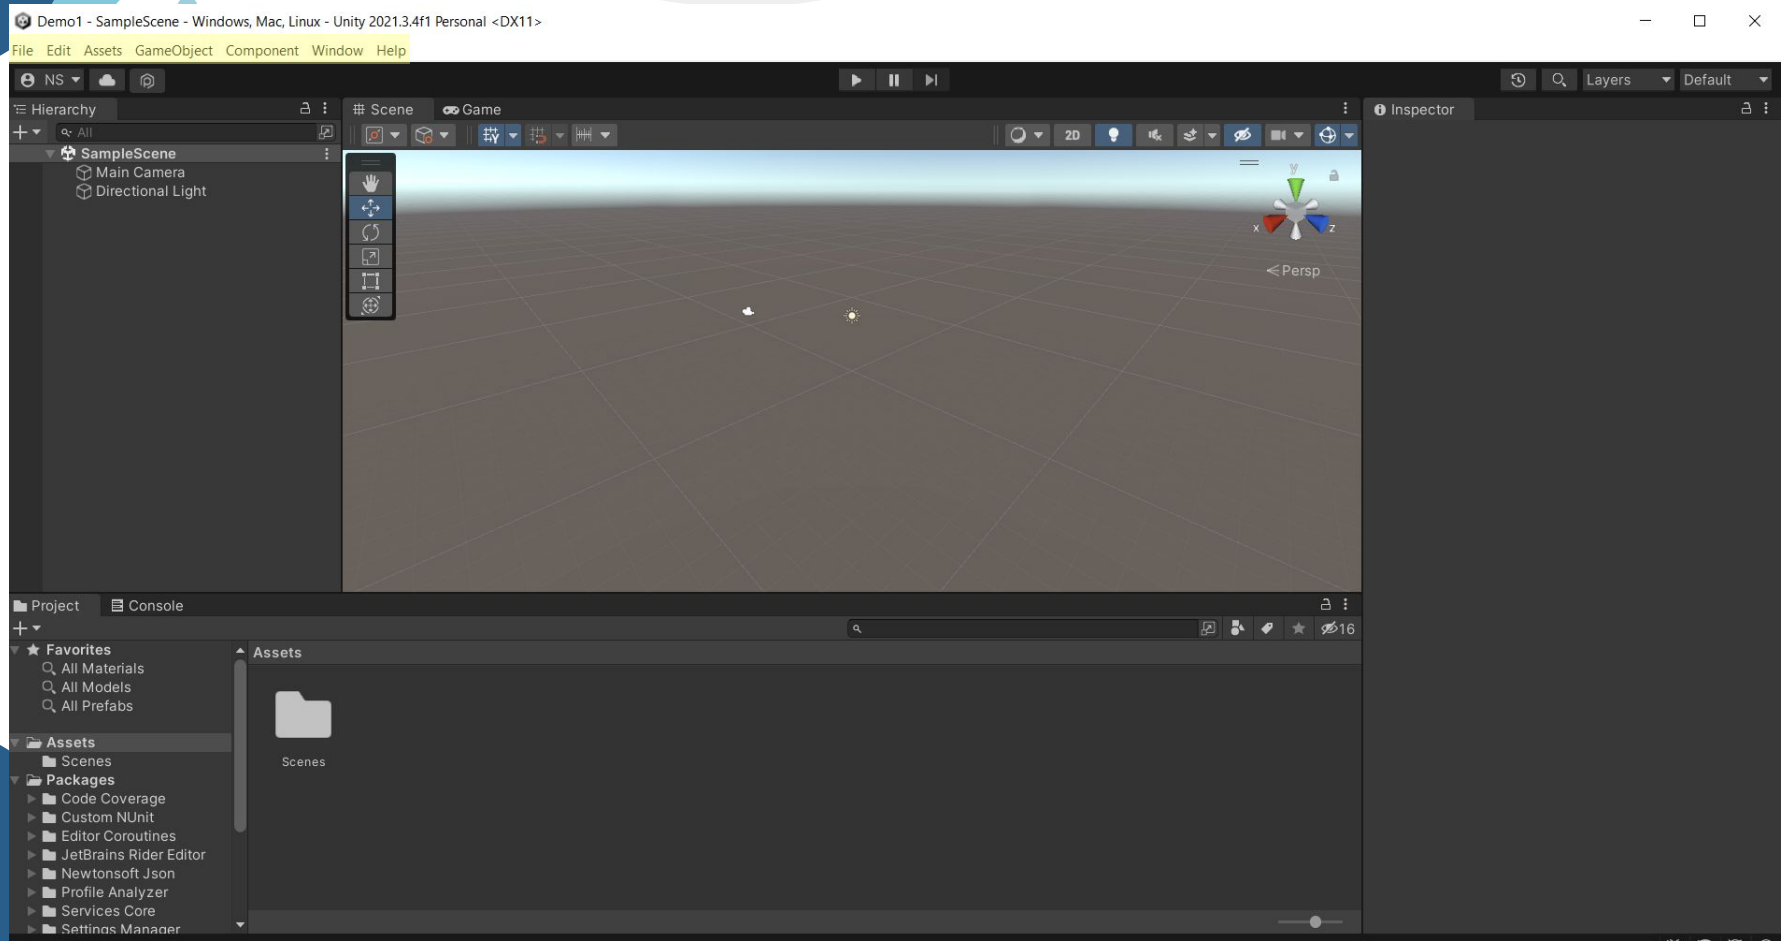
View The Game From The Player's Eyes



Run and Pause the Game



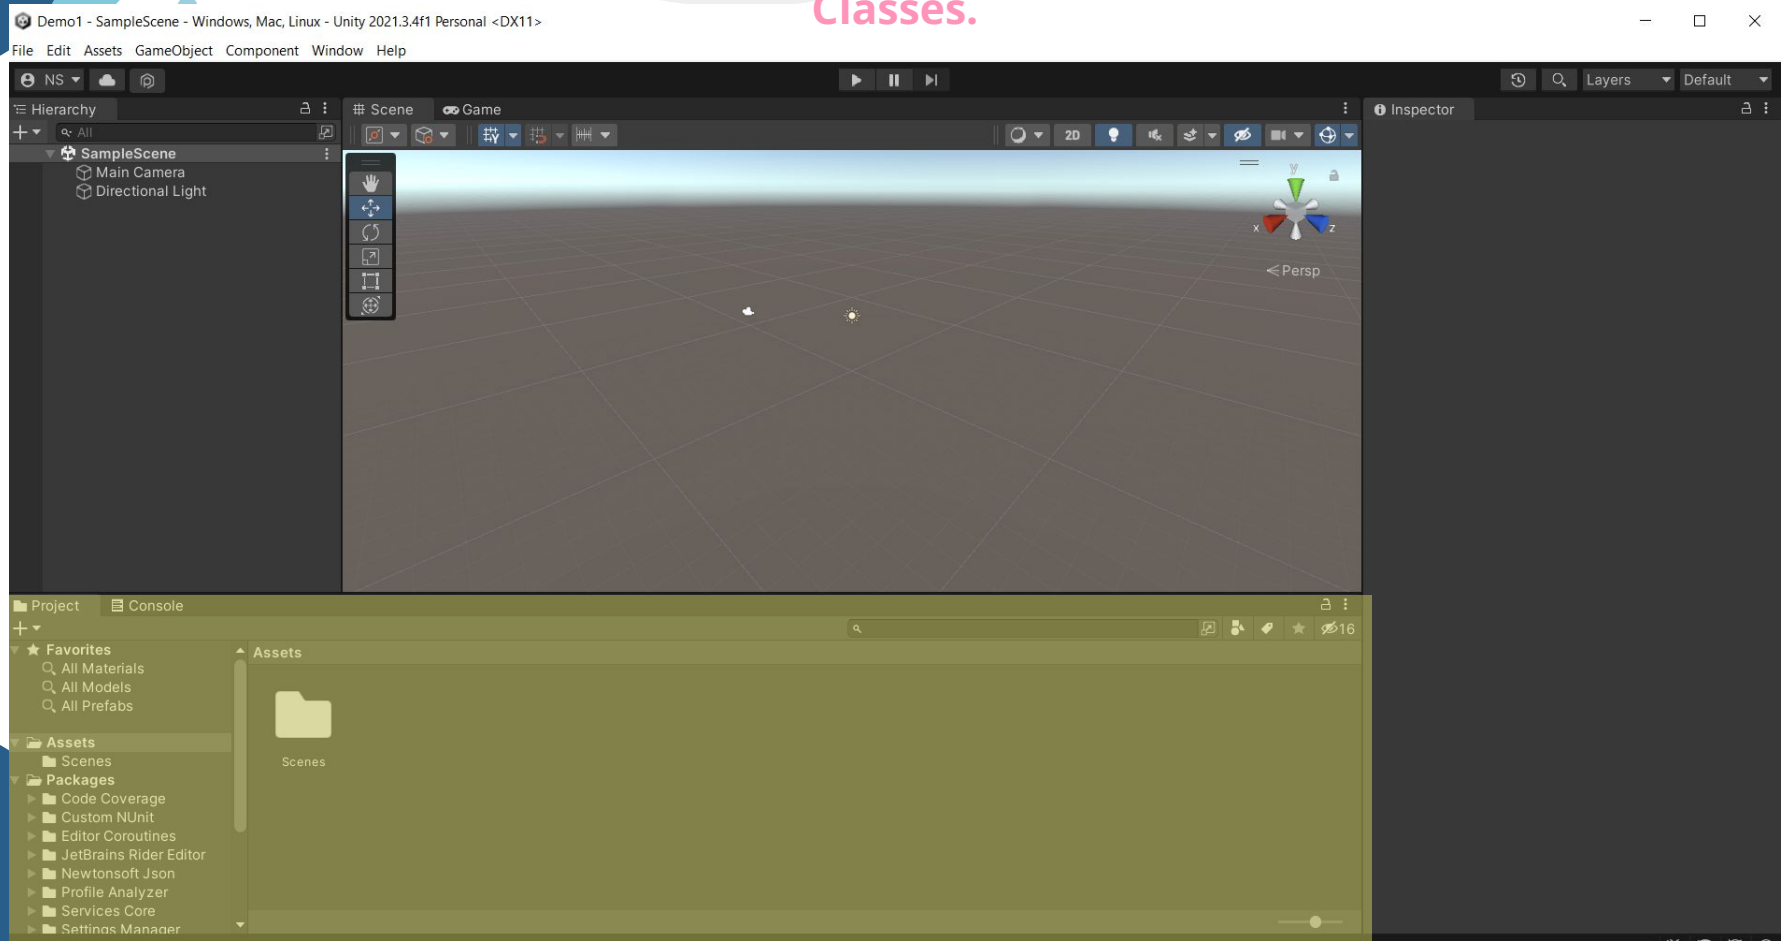
Extra Features



What’s Most Important to Know?

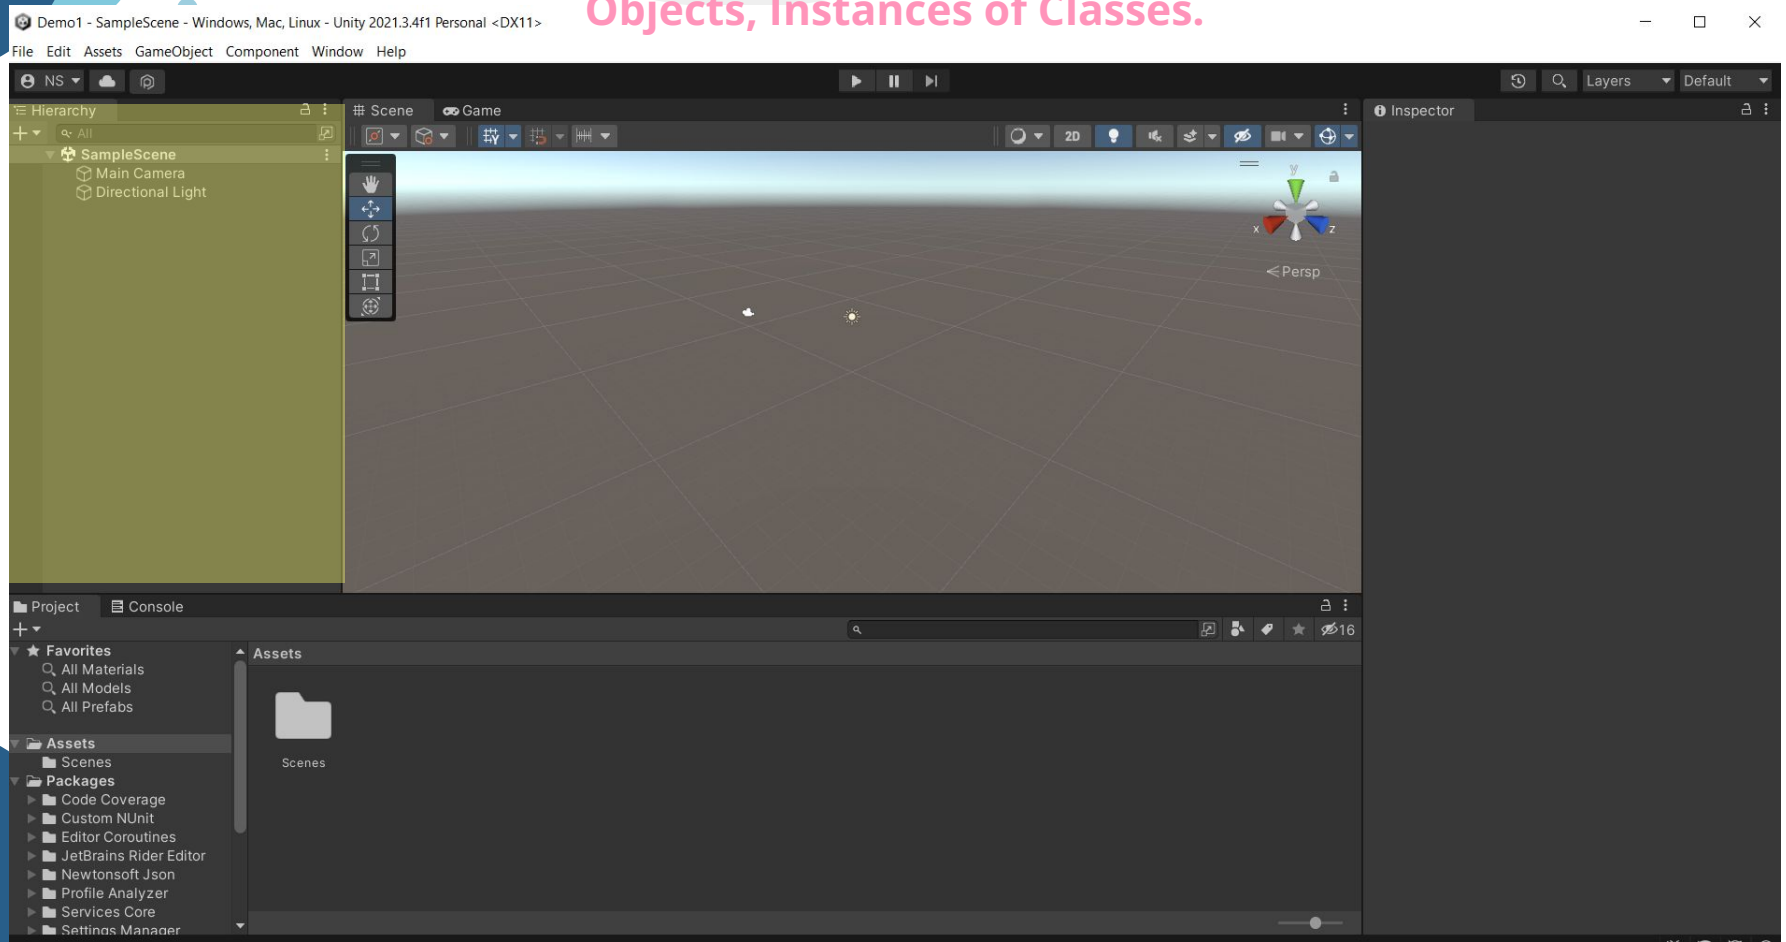
Always Exists In Every Scene.

Classes.



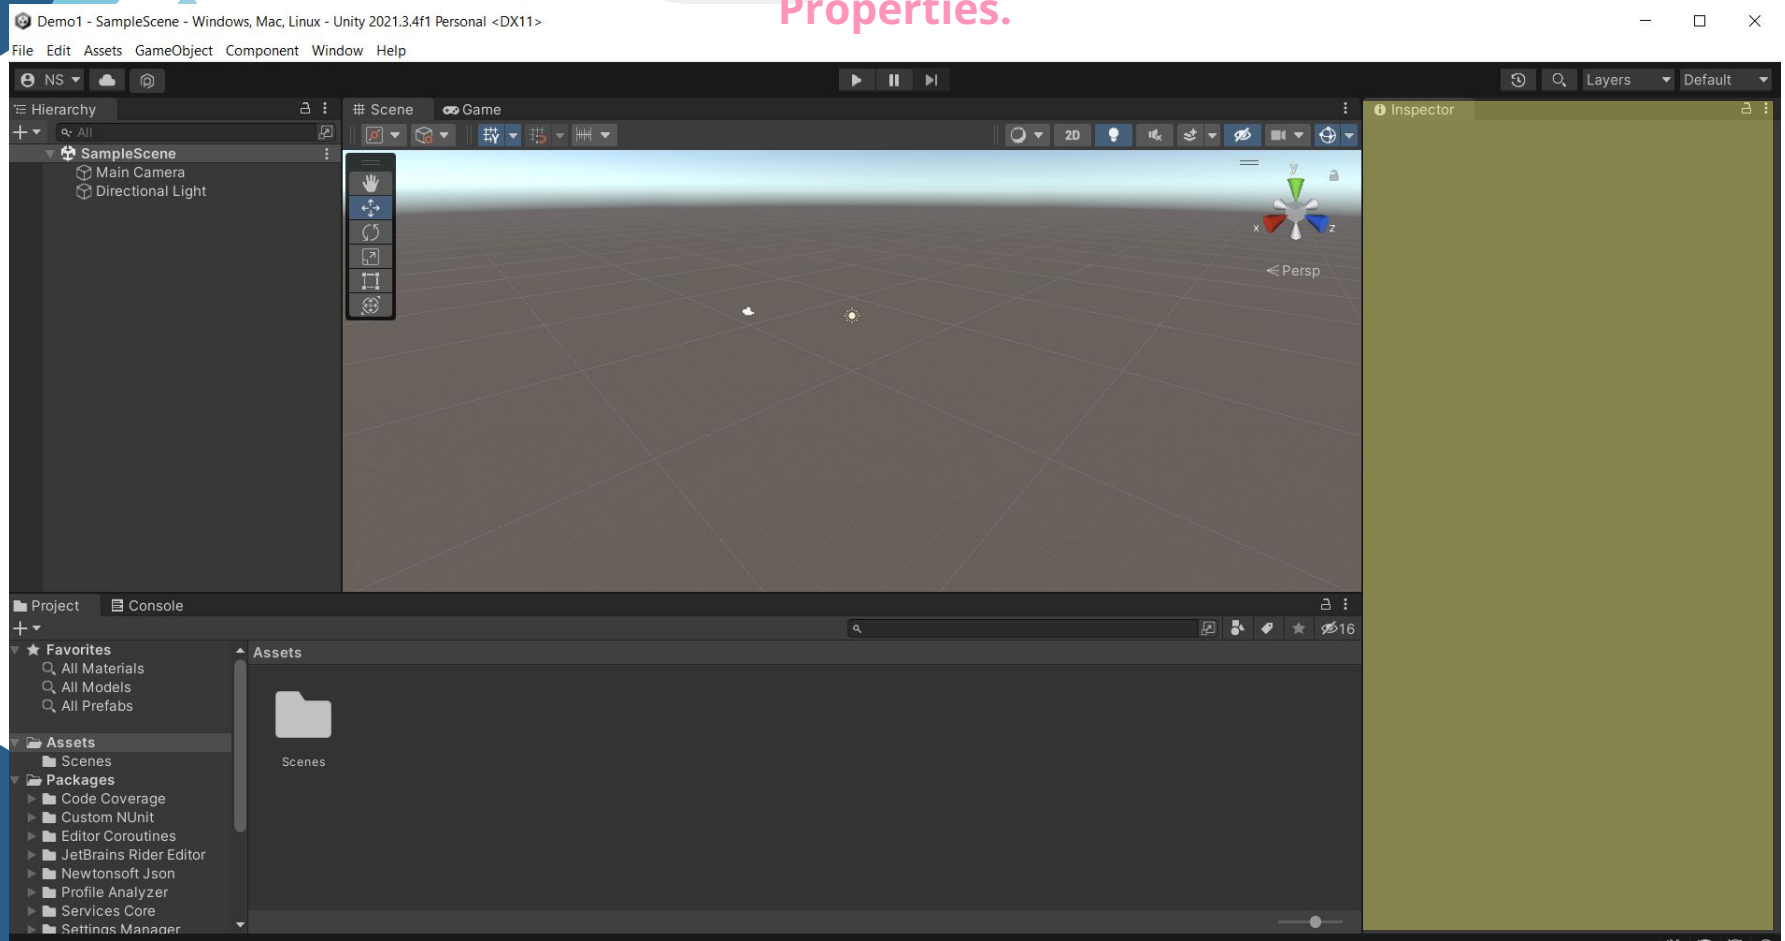
Only Exists In The Scene.

Objects, Instances of Classes.



Add Components To Objects or Classes.

Properties.



Modify the Scene's Layout.

The View.

WIDE WALLS
Be Creative!

WIDE WALLS
Be Creative!

Example: Creating Gravity

RIGIDBODY

Rigidbody
Mass
1
Drag
0
Angular Drag
0.05
Use Gravity
Is Kinematic
Interpolate
None
Collision Detection
Discrete
Constraints
Info

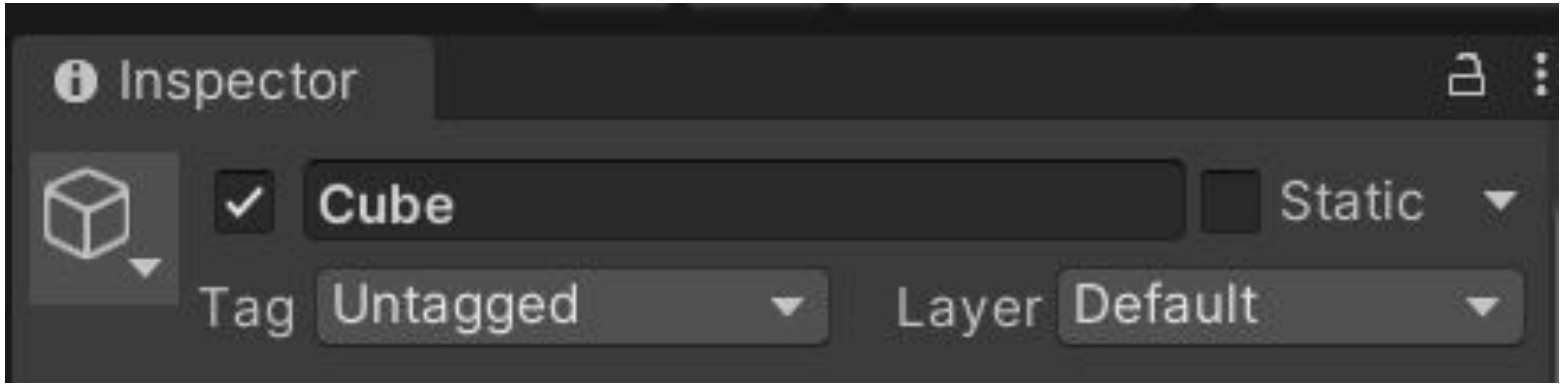
Physics

x-component	y-component
$v_x = v_{xo} + a_x t$	$v_y = v_{yo} + a_y t$
$x = \frac{1}{2}\left(v_{xo} + v_x\right) t$	$y = \frac{1}{2}\left(v_{yo} + v_y\right) t$
$v_x^2 = v_{xo}^2 + 2a_x x$	$v_y^2 = v_{yo}^2 + 2a_y y$
$\Delta x = v_{xo} t + \frac{1}{2} a_x t^2$	$\Delta y = v_{yo} t + \frac{1}{2} a_y t^2$

Physics

x-component	y-component
$v_x = v_{xo} + a_x t$	$v_y = v_{yo} + a_y t$
$x = \frac{1}{2}\left(v_{xo} + v_x\right) t$	$y = \frac{1}{2}\left(v_{yo} + v_y\right) t$
$v_x^2 = v_{xo}^2 + 2a_x x$	$v_y^2 = v_{yo}^2 + 2a_y y$
$\Delta x = v_{xo} t + \frac{1}{2} a_x t^2$	$\Delta y = v_{yo} t + \frac{1}{2} a_y t^2$

Tags and Layers



Can we do more?

Can we do more?

JUMPING

Summary of Key Aspects

Getting objects with Tags

```
GameObject.FindGameObjectsWithTag("Ground");
```

User Inputs

```
if (Input.GetKey("w"))
{
```

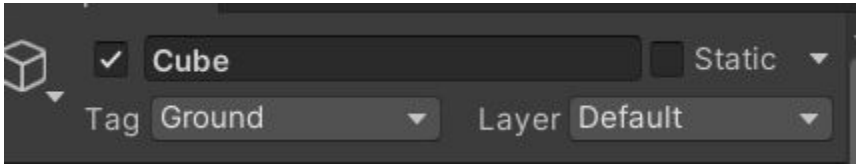
Components
Box Colliders

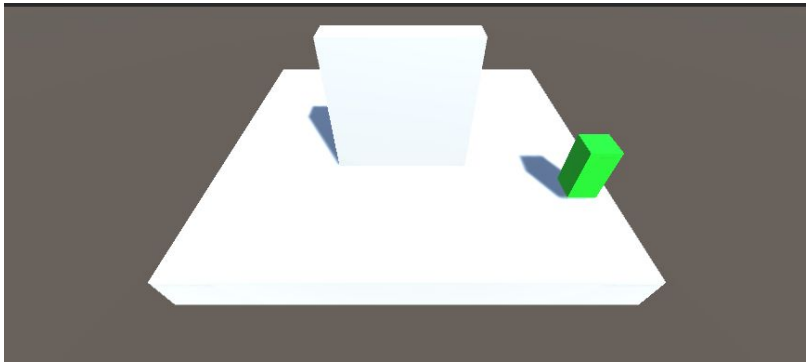
```
GetComponent<BoxCollider>().bounds.extents.y
```

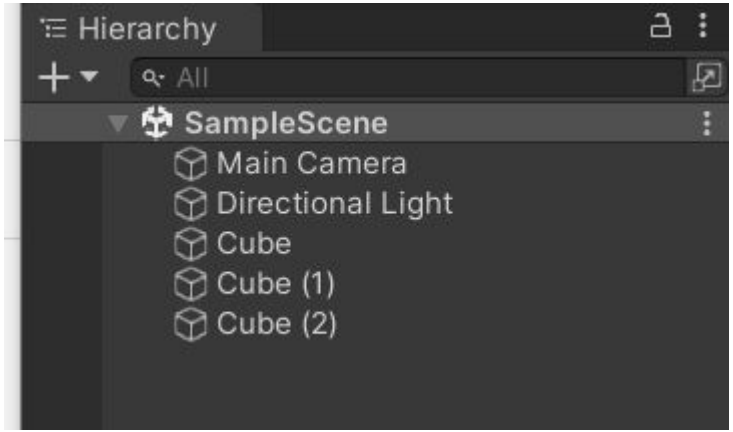
Physics

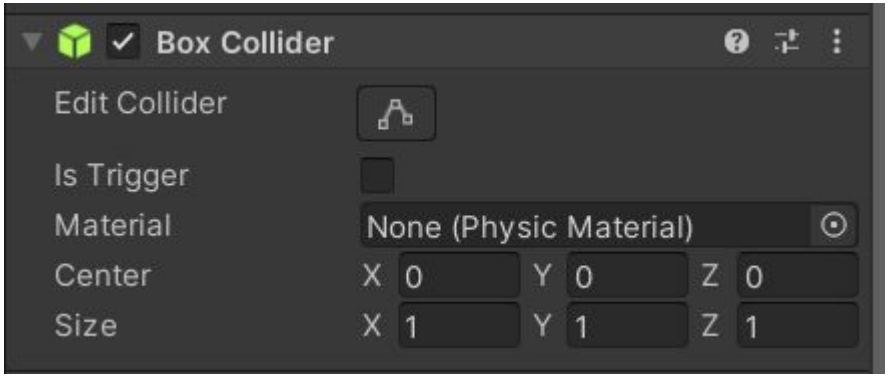
```
float ypos = startY + startVeloY * t - (1f / 2f) * accel_due_to_gravity * t * t;
```

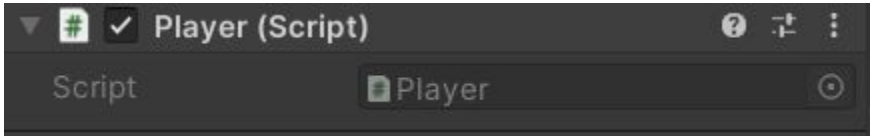
Summary of Key Aspects









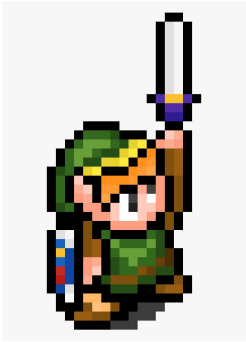


HIGH CEILING
Knowing the Details

What more would we want in an official game?

What more would we want in an official game?

Art!



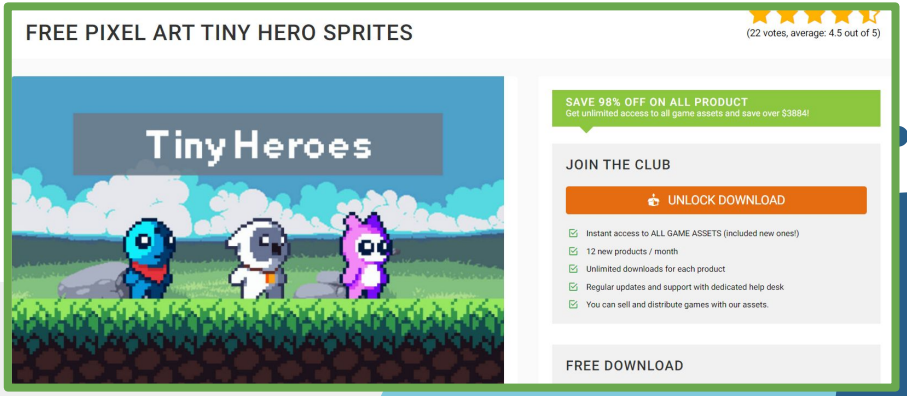
Animation

Music

Step 1: Draw! (Or use open source sprites to download)

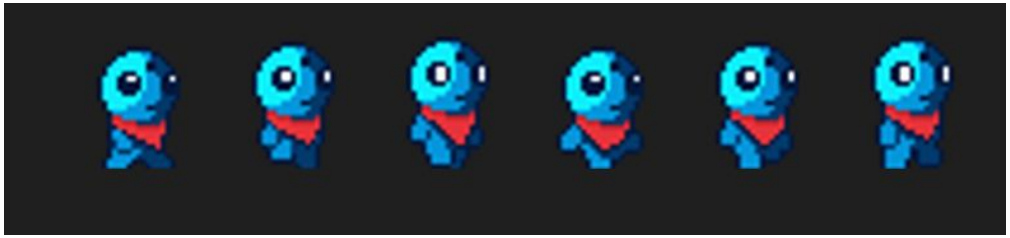
I have no drawing talent, so

And this one looks nice!

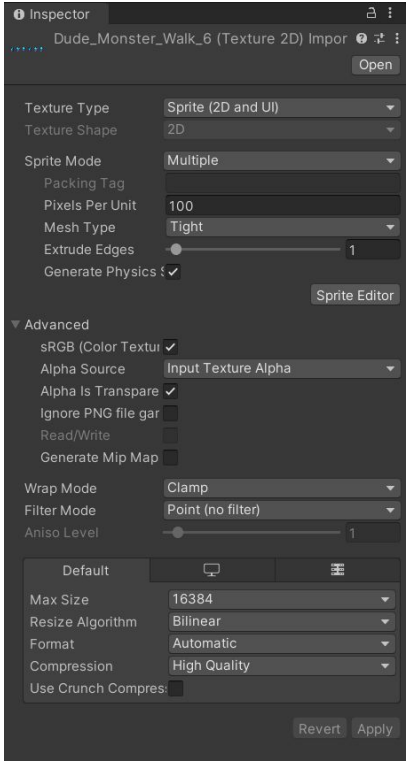


Step 2: Sprite Sheet

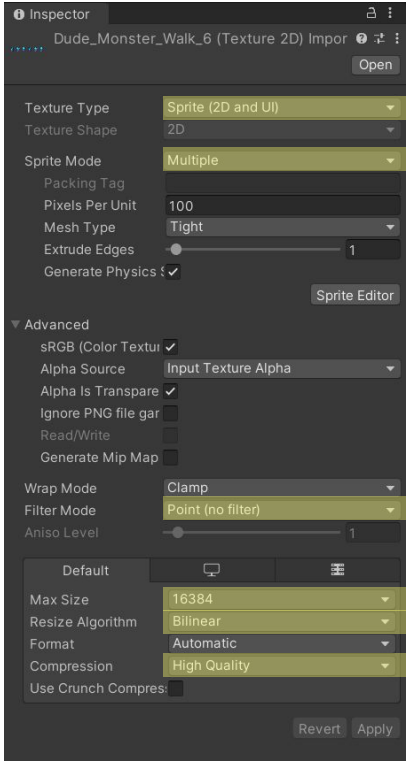
Walking Sprite Sheet



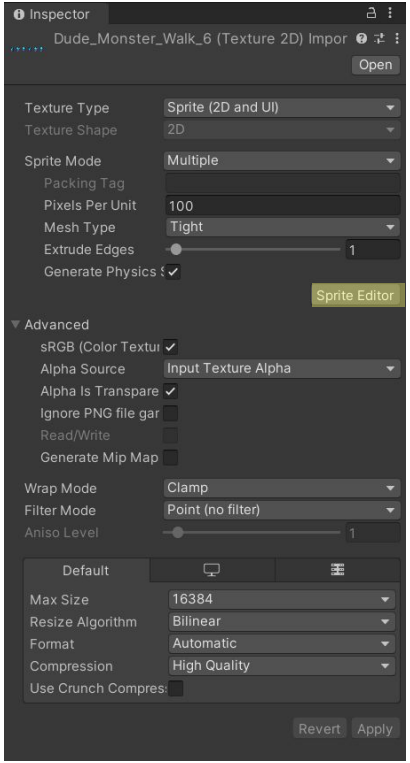
Step 3: Unity Splice



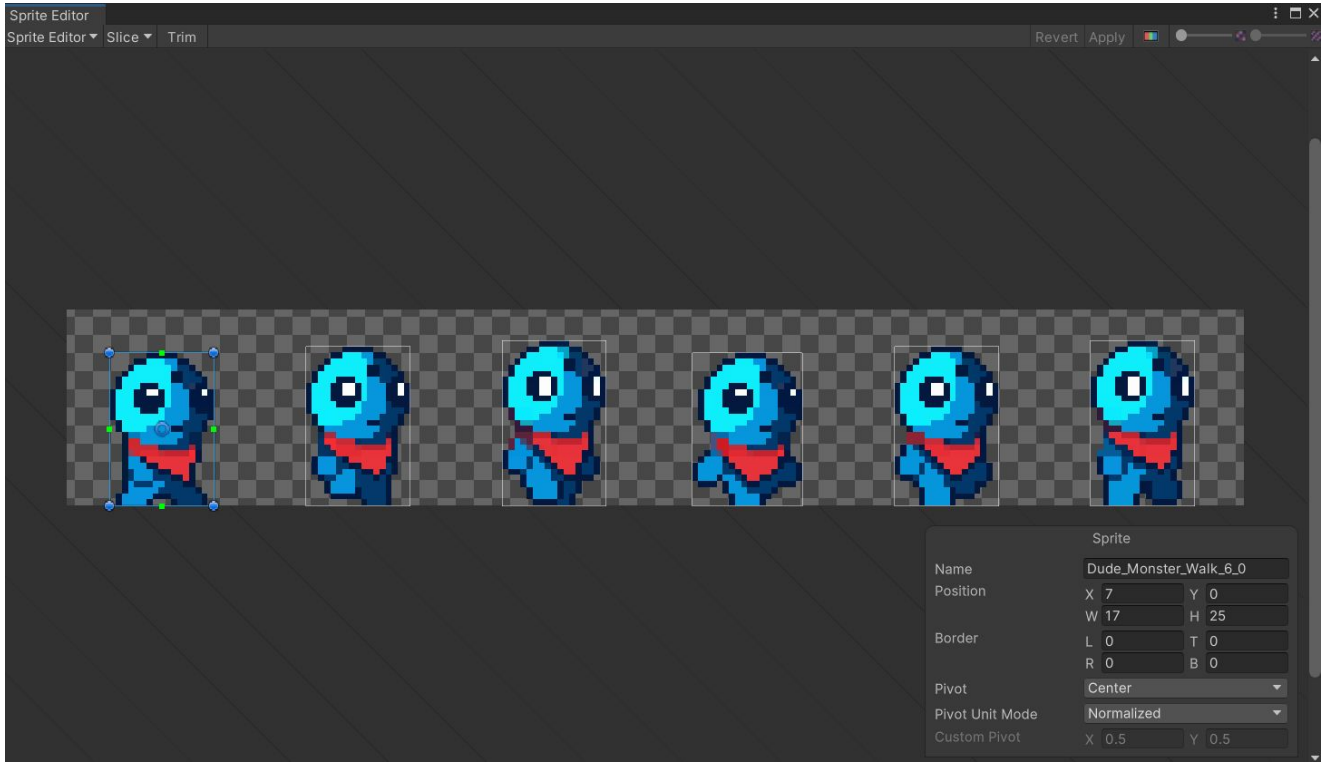
Step 3: Unity Splice



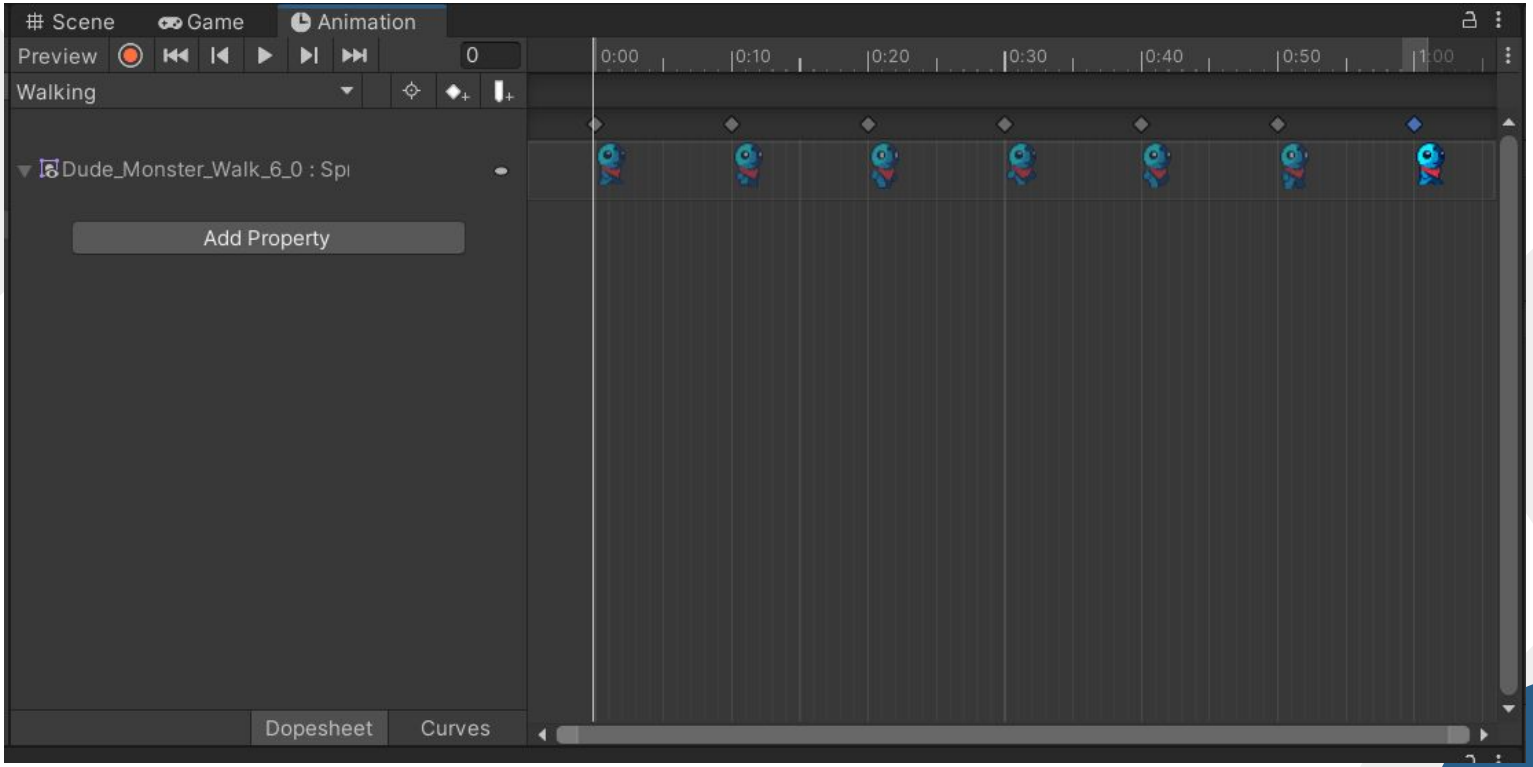
Step 3: Unity Splice



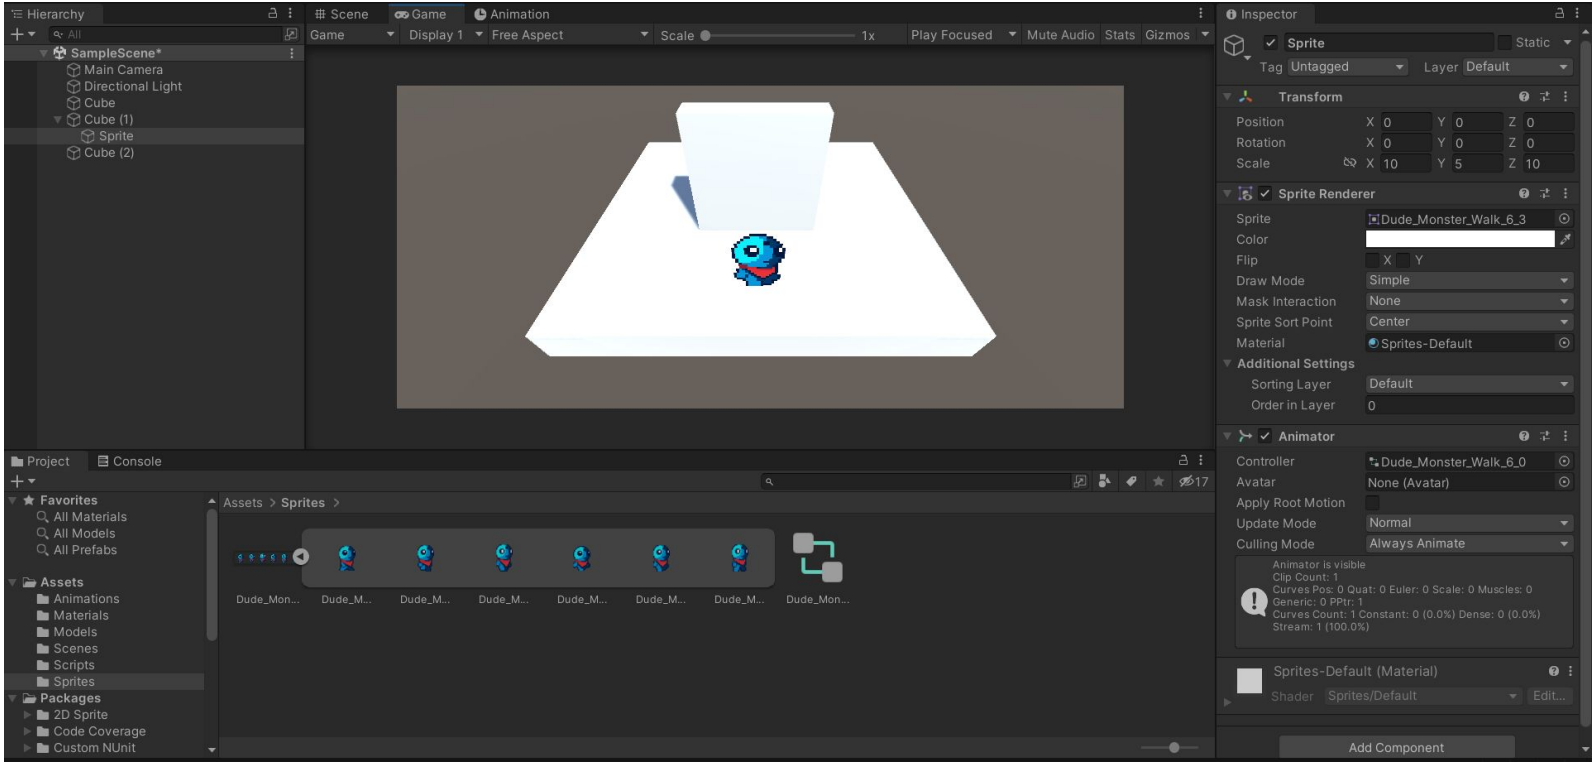
Step 3: Unity Splice



Step 4: Animation



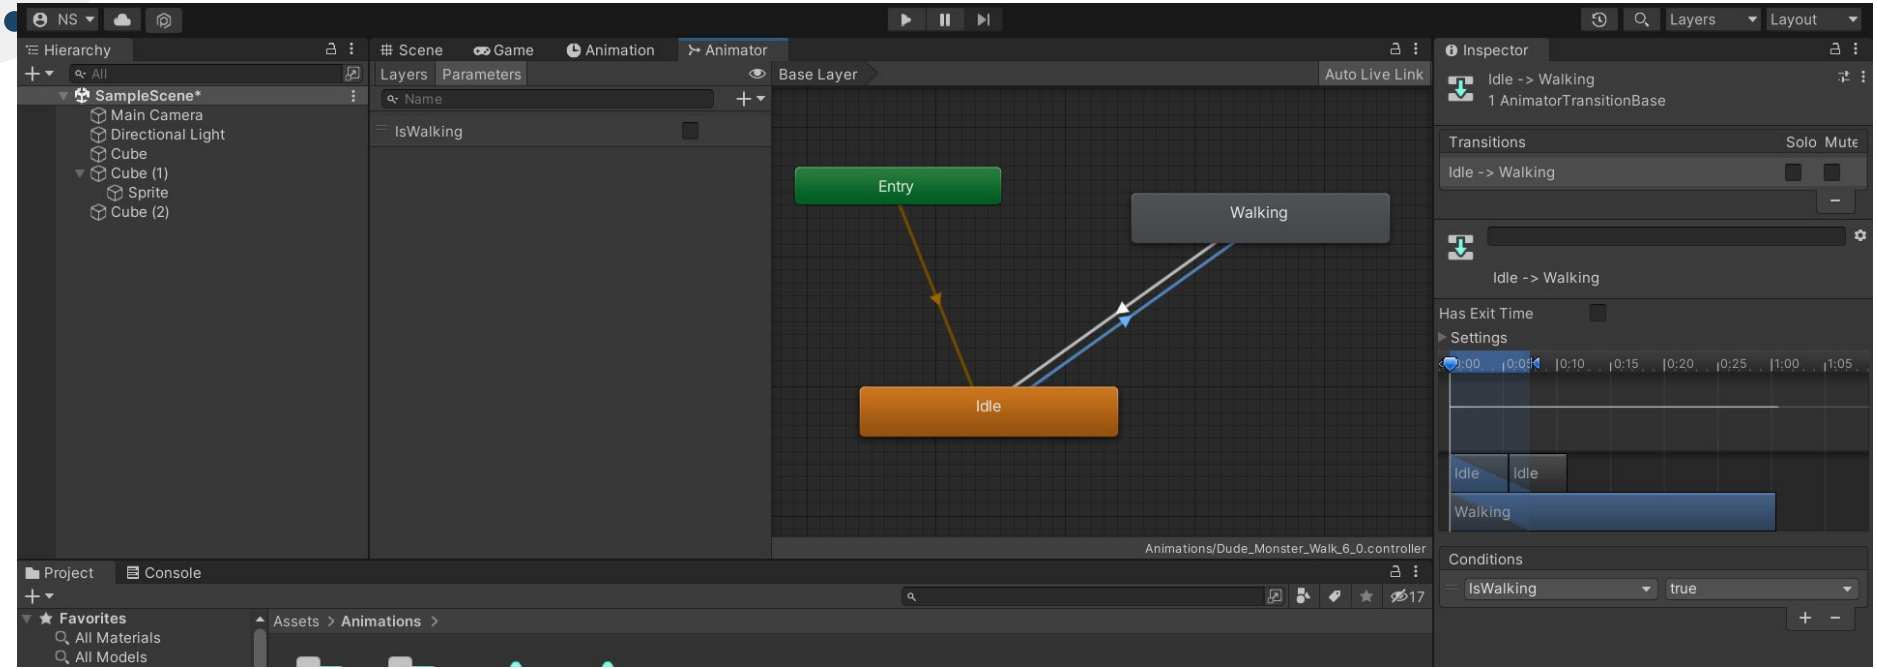
Step 5: Putting it into the scene



Hoorayyy

But how do we make it animate *only* when we move?

Animator!



```
playerAnimator.SetBool("IsWalking", true);
```

With Flips

```
if (Input.GetKey("a"))
{
    transform.position -= transform.right * speed;
    playerAnimator.SetBool("IsWalking", true);
    transform.localScale = new Vector3(-1 * Mathf.Abs(transform.localScale.x), transform.localScale.y, transform.localScale.z);
}
```

Unity

Summary

- We learned:
  - Game Engines
    - Unity
      - Low Floor, Wide Walls, High Ceiling
- We made:
  - a 3D Game
  - Collisions
  - Physics
  - Sprites
  - Animation

Suggested Strategy:

1. **Open Unity**
2. **Make a Scene**
3. **Make empty folders for**
    a. **Prefabs**
    b. **Scripts**
    c. **Materials**
    d. **Animations**
4. **Drag prefabs onto the scene to make Objects**
5. **Make Scripts for your objects**
6. **Code the player physics and collisions**
7. **Add art and animation!**

THANK YOU
