

Customizing

STORY

Caltopian intelligence secured a copy of Gobian Union's Satellite Provisioning And Control Environment [SPACE] during the disarray following their fall. First, register your account with SPACE so you can log into satellites from the comfort of your home planet.

Regardless of which setup you have used, you will now need to *customize* the virtual machine. Log in to the virtual machine as the user `customizer` with the password `customizer`, and follow the subsequent prompts.

Note that customization **requires your partner's Cal ID**. Both you and your partner should customize your VM using the same IDs (the order of the IDs does not matter).

If you want to do some initial exploration by yourself before you've finalized your team, you can start off using just your ID for this customization step. Once you have your team in place, you'll need to start again with a clean VM image customized as mentioned here. Any exploits you've developed for your private VM image will need to be rewritten to be compatible with the new customization. This should go quickly once you understand the exploit.

If the IDs used by the VM are incorrect, you and your partner may fail the autograder tests. Make sure that you include your EXACT ID number.

Once you have finished customizing your virtual machine, you will receive the username and password for the first question.
