# CS 70 Discrete Mathematics and Probability Theory Spring 2023 Satish Rao and Babak Ayazifar

DIS 0B

## 1 Perfect Square

Note 2

- (a) Prove that if  $n^2$  is odd, then n must also be odd.
- (b) Prove that if  $n^2$  is odd, then  $n^2$  can be written in the form 8k + 1 for some integer k.

### 2 Numbers of Friends

Note 2

Prove that if there are  $n \ge 2$  people at a party, then at least 2 of them have the same number of friends at the party. Assume that friendships are always reciprocated: that is, if Alice is friends with Bob, then Bob is also friends with Alice.

(Hint: The Pigeonhole Principle states that if n items are placed in m containers, where n > m, at least one container must contain more than one item. You may use this without proof.)

CS 70, Spring 2023, DIS 0B

#### 3 Pebbles

Note 2

Suppose you have a rectangular array of pebbles, where each pebble is either red or blue. Suppose that for every way of choosing one pebble from each column, there exists a red pebble among the chosen ones.

Prove that there must exist an all-red column.

### 4 Preserving Set Operations

Note 0 Note 2 For a function f, define the image of a set X to be the set  $f(X) = \{y \mid y = f(x) \text{ for some } x \in X\}$ . Define the inverse image or preimage of a set Y to be the set  $f^{-1}(Y) = \{x \mid f(x) \in Y\}$ . Prove the following statements, in which A and B are sets.

*Recall:* For sets X and Y, X = Y if and only if  $X \subseteq Y$  and  $Y \subseteq X$ . To prove that  $X \subseteq Y$ , it is sufficient to show that  $(\forall x)$   $((x \in X) \implies (x \in Y))$ .

(a) 
$$f^{-1}(A \cup B) = f^{-1}(A) \cup f^{-1}(B)$$
.

(b) 
$$f(A \cup B) = f(A) \cup f(B)$$
.
